

INTELLIGENT BUSINESS SOLUTIONS

Today's businesses need to move fast to be successful. Rapidly changing competitive landscapes mean that opportunities can evaporate overnight. The ability to respond quickly and cost effectively can be the difference between achieving growth and struggling with stagnation.

IFConnect offers intelligent business solutions that help our clients capitalize on key opportunities as they arise. From process reengineering and product development to project leadership and "virtual project teams", IFConnect operates transparently in order to reduce business risk and ensure that our clients' projects are truly successful.

VIRTUAL PROJECT TEAMS

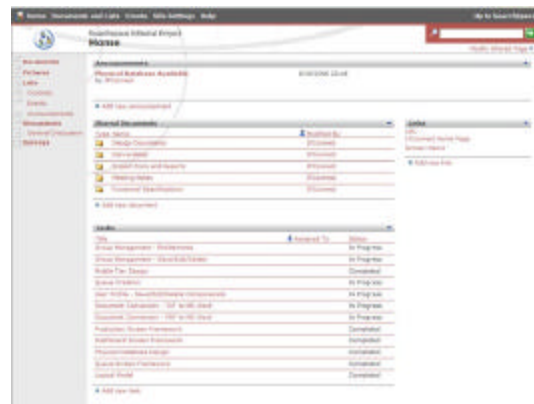

IFConnect Virtual Project Teams enable clients to rapidly deploy and focus dedicated engineering and project resources on important corporate initiatives without increasing headcount. These virtual teams are tightly integrated with client staff and can be quickly expanded or reduced at the direction of each client in order to control development costs.

PORTFOLIO MANAGEMENT FOR PROJECTS

IFConnect specializes in helping clients analyze and manage diverse project portfolios. Clients leverage our experience to determine the real value of each project based on their relative risk, return, required investment and volatility. We ensure that clients consider the best resource allocations and help them develop and implement appropriate business processes in order to ensure the success of their project investments.

PROJECT TRANSPARENCY

IFConnect clients have a window into all of their Virtual Project Team's activities. Our Project Center provides clients with real-time access to important documents, project alerts, meeting notes, the status of key project milestones and more.

EXPERIENCE

IFConnect has provided project leadership and back-office solutions to many industry leaders and innovators including the companies listed below:
